Revisioe delle collezioni scheletriche del Museo Storia Naturale di Firenze: il sito neolitico di Grotta Pollera (Finale Ligure, SV).

The Pollera skeletal collections are housed in three different Italian museums:
- Museo Archeologico del Finale, Finale Ligure (SV)
- Museo Archeologico Ligure, Genova (GE)
- Museo Archeologico del Finale, Finale Ligure (SV)

The sample is mostly composed by subadult individuals. Fetuses and newborns are very well preserved. Few anatomical elements of adults are present.

The museum skeletal collection revision is required

- Identification of all anatomical elements for each catalogue number
- Possible / probable / certain association of isolated skeletal elements
- New MINI
- New bibliographic research

Without association: 55 individuals

With association: 38 individuals
32 subadults & 6 adults
Perrando (2-10, <11 years): n. 6; Infants (1-6 years): n. 19; Child (7-12 years): n. 10, Adult (> 20 years): n. 5
No sex determination (only one probably adult female)
